

An advertisement for Argos featuring a collection of luxury items. In the foreground, a large, ornate silver cash register is partially visible. Resting on its circular base are several pieces of jewelry: a gold watch with a rectangular face and a metal link bracelet, a gold watch with a round face and a metal link bracelet, and a gold chain necklace. To the left of the cash register is a tall, rectangular gold jewelry box with a textured surface. In the background, a black Argos-branded box stands upright. The entire scene is set against a dark blue background.

SUNLAMPS AND SOLARIUM

Natural sunlight emits ultra-violet and infra-red rays which are reproduced in sunlamps.

Ultra-Violet Radiation

UVA (Direct tanning): Tanning is caused by oxidation of pigment already in the skin. Your skin does not turn red but takes longer to tan than by UVB.

UVB (Direct tanning): UVB produces a tan by creating new pigment in the skin. There is slight reddening of the skin which disappears and a tan remains. This method provides protection against strong sunlight and is faster than UVA.

Infra-Red Radiation

IR Infra-red rays penetrate the skin and relax aching muscles and other conditions.
